PROFESSIONAL SUMMARY

Senior QA Engineer with 5+ years of experience shipping reliable software for regulated healthcare, insurance-benefits and legal-tech products in fully remote, international teams. Introduced the first automation framework at Globaly Hub, builds Cypress regression suites (JavaScript/TypeScript) and Maestro mobile automation, and owns release quality from test strategy to sign-off.

Built an AI-powered test case generator that turns UI designs into structured test cases. Combines automation with deep exploratory testing to catch what scripts miss, mentors junior QA engineers, and writes on how human judgement and AI work together in testing.

CORE SKILLS

- **Test Automation:** Cypress, Playwright, Maestro (mobile), BDD scenarios in Gherkin, JavaScript/TypeScript, framework design, Page Object Model, UI and end-to-end automation, monorepo setup
- **AI in QA:** LLM-based test case generation, prompt design for test coverage, Google Gemini API, reviewing AI output for accuracy
- **Quality Strategy & Releases:** Test strategy and planning, release management, release notes, pre- and post-release verification, defect triage, QA metrics and dashboards
- **Testing Expertise:** Exploratory, functional, regression, smoke/sanity, integration, system and mobile testing
- **API & Data:** Postman, Swagger/OpenAPI, REST API integration (Figma API), JSON validation, MySQL, data validation, test data management
- **Debugging & Observability:** Browser DevTools, network debugging, log analysis, Azure Monitor (basic)
- **Ways of Working:** Agile/Scrum, sprint planning, QA estimation, Git, Jira, ClickUp, Confluence, mentoring, knowledge-sharing sessions

PROFESSIONAL EXPERIENCE

Panthos Labs - Senior Software Engineer, QA 07/2025 – Present

- Built an AI test case generator (Next.js, TypeScript) that turns UI screenshots or Figma frames into structured test cases using the Google Gemini API (Gemini 2.5 Flash).
- Designed the prompts to cover functional, UI/UX, accessibility, error-state and boundary scenarios, with output in Gherkin/BDD, JSON, Markdown, plain text or Excel for direct import into test management.
- Used the tool to draft test cases, reviewing and refining every AI output, which made test design for new screens noticeably faster.
- Own release quality for client products: validating builds, giving release sign-off, and preparing release notes for stakeholders.
- Lead end-to-end and mobile testing for Masha, a matrimonial mobile app, including mobile UI automation with Maestro, covering new features, regression and release verification.
- Mentor junior QA engineers on test design, automation and bug reporting.

Leapfrog Technology - Senior Software Engineer, QA 01/2025 – 07/2025

- Built and extended automated regression suites for US healthcare products, covering critical user flows and reducing the manual regression effort before each release.
- Owned release planning, release notes and stakeholder updates for regular sprint releases.
- Wrote test plans, test reports and QA standards used by the wider team.
- Mentored junior QA engineers on testing strategy and tools.

Leapfrog Technology - Software Engineer, QA 09/2023 – 01/2025

- Planned and executed end-to-end testing of high-complexity features for Laudio (healthcare) and Venteur (ICHRA health-benefits reimbursement platform).
- Wrote Cypress automation scripts for Venteur, cutting repetitive manual checks.

- Redesigned bug reporting with templates, tags and sprint dashboards, making bug status visible to the whole team.
- Introduced pre- and post-release checks and supported production deployments and troubleshooting.

Zegal - QA Engineer 05/2023 – 08/2023

- Designed and maintained automated test scripts for a legal-tech platform, alongside smoke and regression testing.
- Shared testing best practices with the team.

Globaly Hub 06/2021 – 05/2023

QA Automation Lead (09/2022 – 05/2023) · QA Automation Engineer (05/2022 – 09/2022) · Associate QA Engineer (10/2021 – 05/2022) · QA Intern (06/2021 – 10/2021)

- Introduced the company's first test automation: built a Cypress framework from scratch for Agentcis, a live education CRM, and grew it into the team's regression suite.
- Led automation planning and execution across multiple projects in development and production, including end-to-end tests in a monorepo with Docker.
- Owned the full QA process (manual and automation) for a production product.
- Progressed from QA Intern to QA Automation Lead.
- Ran knowledge-sharing sessions and mentored junior QA engineers.

LogPoint (Security Analytics) - QA Intern 10/2020 – 01/2021

- Automated two modules through the UI: report creation and download, and log normalization checks between production and proofing.
- Wrote test plans and test cases and logged defects in Jira from log-file analysis.

PROJECTS

- **AI Test Case Generator (Panthos Labs, internal tool)** - Next.js and TypeScript app that sends UI screenshots or Figma frames to Google Gemini and returns test cases in BDD, JSON, Markdown or Excel. Supports multi-screen analysis, project history and Figma API import.
